

WHAT IS CLAIMED IS:

1. A shield connection structure comprising:  
a conductive shield member including  
a plate member having a hole in which a shielded  
wire is inserted,  
a connection portion for connecting to a shielding  
portion of the shielded wire, and  
a reinforcing rib formed on a peripheral edge  
portion of said shield member;  
wherein said shield member is fixed to a casing for  
grounding.

2. A shield connection structure according to claim 1,  
wherein said connection portion has a tubular shape, and is  
formed on and projects perpendicularly from an end portion of  
said hole for passing said shielded wire therethrough.

3. A shield connection structure according to claim 1,  
wherein said reinforcing rib is formed in a continuous manner  
on the peripheral edge portion of said shield member over an  
entire periphery thereof.

4. A shield connection structure according to claim 1,  
wherein said reinforcing rib is integrally formed with said  
shielding member.

Sub  
C,  
CMT

5. A shield connection structure according to claim 1, wherein said shielding member and said reinforcing rib are constituted by one and the same component.

6. A shield member fixed to a casing for grounding comprising:  
a plate member having a hole;

a connection portion having a tubular shape provided around the hole for supporting and connecting to a shielding portion of a shielded wire; and

a reinforcing rib integrally formed on a peripheral edge portion of said shield member.
